

Package: BaseSet (via r-universe)

November 27, 2024

Title Working with Sets the Tidy Way

Version 0.9.0.9002

Description Implements a class and methods to work with sets, doing intersection, union, complementary sets, power sets, cartesian product and other set operations in a ``tidy" way. These set operations are available for both classical sets and fuzzy sets. Import sets from several formats or from other several data structures.

activate

*Determine the context of subsequent manipulations.***Description**

Functions to help to perform some action to just some type of data: elements, sets or relations. activate: To table the focus of future manipulations: elements, sets or relations. active: To check the focus on the TidySet. deactivate: To remove the focus on a specific TidySet-

Usage

```
activate(.data, what)
```

```
active(.data)
```

```
deactivate(.data)
```

Arguments

<code>.data</code>	A TidySet object.
<code>what</code>	Either "elements", "sets" or "relations"

Value

A TidySet object.

See Also

Other methods: [TidySet-class](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
a <- tidySet(relations)
elements(a) <- cbind(elements(a),
  type = c(rep("Gene", 4), rep("lncRNA", 2))
)
# Filter in the whole TidySet
filter(a, elements == "a")
filter(a, elements == "a", type == "Gene")
# Equivalent to filter_elements
filter_element(a, type == "Gene")
a <- activate(a, "elements")
active(a)
filter(a, type == "Gene")
a <- deactivate(a)
active(a)
filter(a, type == "Gene")
```

add_column	<i>Add column</i>
------------	-------------------

Description

Add column to a slot of the TidySet object.

Usage

```
add_column(object, slot, columns)

## S4 method for signature 'TidySet,character'
add_column(object, slot, columns)
```

Arguments

object	A TidySet object.
slot	A TidySet slot.
columns	The columns to add.

Value

A TidySet object.

Methods (by class)

- `add_column(object = TidySet, slot = character)`: Add a column to any slot

See Also

[rename_set\(\)](#)

Other column: [remove_column\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
```

```
TS <- tidySet(relations)
add_column(TS, "relations", data.frame(well = c(
  "GOOD", "BAD", "WORSE",
  "UGLY", "FOE", "HEY"
)))
```

add_elements

Add elements to a TidySet

Description

Functions to add elements. If the elements are new they are added, otherwise they are omitted.

Usage

```
add_elements(object, elements, ...)
```

Arguments

object	A TidySet object
elements	A character vector of the elements.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A [TidySet](#) object with the new elements.

Note

add_element doesn't set up any other information about the elements. Remember to add/modify them if needed with [mutate](#) or [mutate_element](#)

See Also

Other add_*: [add_relations\(\)](#), [add_sets\(\)](#)

Examples

```
x <- list("a" = letters[1:5], "b" = LETTERS[3:7])
a <- tidySet(x)
b <- add_elements(a, "fg")
elements(b)
```

add_relation	<i>Add relations</i>
--------------	----------------------

Description

Given a TidySet adds new relations between elements and sets.

Usage

```
add_relation(object, relations, ...)
```

```
## S4 method for signature 'TidySet,data.frame'
add_relation(object, relations)
```

Arguments

object	A TidySet object
relations	A data.frame object
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A TidySet object.

Methods (by class)

- `add_relation(object = TidySet, relations = data.frame)`: Adds relations

See Also

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
relations <- data.frame(
```

```

    sets = c(rep("A2", 5), "B2"),
    elements = letters[seq_len(6)],
    fuzzy = runif(6),
    new = runif(6)
  )
  add_relation(TS, relations)

```

 add_relations

Add relations to a TidySet

Description

Adds new relations to existing or new sets and elements. If the sets or elements do not exist they are added.

Usage

```
add_relations(object, elements, sets, fuzzy, ...)
```

Arguments

object	A TidySet object
elements	A character vector of the elements.
sets	A character vector of sets to be added.
fuzzy	The strength of the membership.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A [TidySet](#) object with the new relations.

Note

add_relations doesn't set up any other information about the relationship. Remember to add/modify them if needed with [mutate](#) or [mutate_relation](#)

See Also

[add_relation\(\)](#) to add relations with new sets or/and new elements.

Other add_*: [add_elements\(\)](#), [add_sets\(\)](#)

Examples

```
x <- list("a" = letters[1:5], "b" = LETTERS[3:7])
a <- tidySet(x)
add_relations(a, elements = c("a", "b", "g"), sets = "d")
add_relations(a, elements = c("a", "b"), sets = c("d", "g"))
add_relations(a, elements = c("a", "b"), sets = c("d", "g"), fuzzy = 0.5)
add_relations(a,
  elements = c("a", "b"), sets = c("d", "g"),
  fuzzy = c(0.5, 0.7)
)
```

add_sets

Add sets to a TidySet

Description

Functions to add sets. If the sets are new they are added, otherwise they are omitted.

Usage

```
add_sets(object, sets, ...)
```

Arguments

object	A TidySet object
sets	A character vector of sets to be added.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A [TidySet](#) object with the new sets.

Note

add_sets doesn't set up any other information about the sets. Remember to add/modify them if needed with [mutate](#) or [mutate_set](#)

See Also

Other add_*: [add_elements\(\)](#), [add_relations\(\)](#)

Examples

```
x <- list("a" = letters[1:5], "b" = LETTERS[3:7])
a <- tidySet(x)
b <- add_sets(a, "fg")
sets(b)
```

adjacency

Adjacency

Description

Are two elements connected ?

Usage

```
## S3 method for class 'TidySet'  
adjacency(object)  
  
adjacency_element(object)  
  
adjacency_set(object)  
  
## S3 method for class 'TidySet'  
adjacency(object)
```

Arguments

object A TidySet object

Value

A square matrix, 1 if two nodes are connected, 0 otherwise.

See Also

[incidence\(\)](#)

Examples

```
x <- list("SET1" = letters[1:5], "SET2" = LETTERS[3:7])  
a <- tidySet(x)  
adjacency_element(a)  
adjacency_set(a)
```

arrange.TidySet	<i>Arrange the order of a TidySet</i>
-----------------	---------------------------------------

Description

Use `arrange` to extract the columns of a `TidySet` object. You can use `activate` with `filter` or use the specific function. The S3 method filters using all the information on the `TidySet`.

Usage

```
## S3 method for class 'TidySet'
arrange(.data, ...)

arrange_set(.data, ...)

arrange_element(.data, ...)

arrange_relation(.data, ...)
```

Arguments

<code>.data</code>	The <code>TidySet</code> object
<code>...</code>	Comma separated list of variables names or expressions integer column position to be used to reorder the <code>TidySet</code> .

Value

A `TidySet` object

See Also

[dplyr::arrange\(\)](#) and [activate\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B", rep("A2", 5), "B2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
```

```

a <- tidySet(relations)
a <- mutate_element(a,
  type = c(rep("Gene", 4), rep("lncRNA", 2))
)

b <- arrange(a, desc(type))
elements(b)
b <- arrange_element(a, elements)
elements(b)
# Arrange sets
arrange_set(a, sets)

```

as.data.frame.TidySet *Transforms a TidySet to a data.frame*

Description

Flattens the three slots to a single big table

Usage

```

## S3 method for class 'TidySet'
as.data.frame(x, ...)

```

Arguments

x	The TidySet object.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A data.frame table.

as.list.TidySet *Convert to list*

Description

Converts a TidySet to a list.

Usage

```

## S3 method for class 'TidySet'
as.list(x, ...)

```

Arguments

x A TidySet object to be coerced to a list.
 ... Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A list.

Examples

```
r <- data.frame(sets = c("A", "A", "A", "B", "C"),
               elements = c(letters[1:3], letters[2:3]),
               fuzzy = runif(5),
               info = rep_len(c("important", "very important"), 5))
TS <- tidySet(r)
TS
as.list(TS)
```

c,TidySet-method

Combine Values into a Vector or List

Description

This method combines TidySets. It only works if the first element is a TidySet.

Usage

```
## S4 method for signature 'TidySet'
c(x, ...)
```

Arguments

x A TidySet object.
 ... Objects to be concatenated. All NULL entries are dropped.

Examples

```
TS <- tidySet(list(A = letters[1:5], B = letters[6]))
TS2 <- c(TS, data.frame(sets = "C", elements = "gg"))
```

cardinality	<i>Cardinality or membership of sets</i>
-------------	--

Description

Calculates the membership of sets according to the logic defined in FUN.

Usage

```
cardinality(object, sets = NULL, ...)

## S4 method for signature 'TidySet'
cardinality(object, sets, FUN = "sum", ...)
```

Arguments

object	A TidySet object.
sets	Character vector with the name of the sets.
...	Other arguments passed to FUN.
FUN	Function that returns a single numeric value given a vector of fuzzy values.

Methods (by class)

- `cardinality(TidySet)`: Cardinality of sets

See Also

[size\(\)](#)

Examples

```
rel <- list(A = letters[1:3], B = letters[1:2])
TS <- tidySet(rel)
cardinality(TS, "A")
```

cartesian	<i>Create the cartesian product of two sets</i>
-----------	---

Description

Given two sets creates new sets with one element of each set

Usage

```
cartesian(object, set1, set2, name = NULL, ...)
```

```
## S3 method for class 'TidySet'
cartesian(
  object,
  set1,
  set2,
  name = NULL,
  keep = TRUE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep,
  ...
)
```

Arguments

object	A TidySet object.
set1, set2	The name of the sets to be used for the cartesian product
name	The name of the new set.
...	Placeholder for other arguments that could be passed to the method. Currently not used.
keep	A logical value if you want to keep.
keep_relations	A logical value if you want to keep old relations.
keep_elements	A logical value if you want to keep old elements.
keep_sets	A logical value if you want to keep old sets.

Value

A TidySet object with the new set

See Also

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)]
```

```
)
TS <- tidySet(relations)
cartesian(TS, "a", "b")
```

complement

Complement TidySet

Description

Use complement to find elements or sets the TidySet object. You can use activate with complement or use the specific function. You must specify if you want the complements of sets or elements.

Usage

```
complement(.data, ...)
```

Arguments

.data The TidySet object
... Other arguments passed to either [complement_set\(\)](#) or [complement_element\(\)](#).

Value

A TidySet object

See Also

[activate\(\)](#)

Other complements: [complement_element\(\)](#), [complement_set\(\)](#), [subtract\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
rel <- data.frame(
  sets = c("A", "A", "B", "B", "C", "C"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(rel)
TS %>%
  activate("elements") %>%
  complement("a")
```

```

TS %>%
  activate("elements") %>%
  complement("a", "C_a", keep = FALSE)
TS %>%
  activate("set") %>%
  complement("A")
TS %>%
  activate("set") %>%
  complement("A", keep = FALSE)
TS %>%
  activate("set") %>%
  complement("A", FUN = function(x){abs(x - 0.2)}, keep = FALSE)

```

complement_element *Complement of elements*

Description

Return the objects without the elements listed

Usage

```

complement_element(object, elements, ...)

## S4 method for signature 'TidySet,characterORfactor'
complement_element(
  object,
  elements,
  name = NULL,
  FUN = NULL,
  keep = TRUE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep
)

```

Arguments

object	A TidySet object.
elements	The set to look for the complement.
...	Placeholder for other arguments that could be passed to the method. Currently not used.
name	Name of the new set. By default it adds a "C".
FUN	A function to be applied when performing the union. The standard union is the "max" function, but you can provide any other function that given a numeric vector returns a single number.
keep	Logical value to keep all the other sets.

keep_relations A logical value if you wan to keep old relations.
 keep_elements A logical value if you wan to keep old elements.
 keep_sets A logical value if you wan to keep old sets.

Value

A TidySet object.

Methods (by class)

- complement_element(object = TidySet, elements = characterORfactor): Complement of the elements.

See Also

Other complements: [complement_set\(\)](#), [complement\(\)](#), [subtract\(\)](#)

Other methods that create new sets: [complement_set\(\)](#), [intersection\(\)](#), [subtract\(\)](#), [union\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c("A", "A", "B", "B", "C", "C"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
complement_element(TS, "a", "C_a")
complement_element(TS, "a", "C_a", keep = FALSE)
```

complement_set

Complement of a set

Description

Return the complement for a set

Usage

```
complement_set(object, sets, ...)

## S4 method for signature 'TidySet,characterORfactor'
complement_set(
  object,
  sets,
  name = NULL,
  FUN = NULL,
  keep = TRUE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep
)
```

Arguments

object	A TidySet object.
sets	The name of the set to look for the complement.
...	Placeholder for other arguments that could be passed to the method. Currently not used.
name	Name of the new set. By default it adds a "C".
FUN	A function to be applied when performing the union. The standard union is the "max" function, but you can provide any other function that given a numeric vector returns a single number.
keep	Logical value to keep all the other sets.
keep_relations	A logical value if you want to keep old relations.
keep_elements	A logical value if you want to keep old elements.
keep_sets	A logical value if you want to keep old sets.

Value

A TidySet object.

Methods (by class)

- `complement_set(object = TidySet, sets = characterORfactor)`: Complement of the sets.

relations <- data.frame(
  sets = c("A", "A", "B", "B", "C", "C"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
complement_set(TS, "A")
```

dimnames.TidySet	<i>Dimnames of a TidySet</i>
------------------	------------------------------

Description

Retrieve the column names of the slots of a TidySet.

Usage

```
## S3 method for class 'TidySet'
dimnames(x)
```

Arguments

x A TidySet object.

Value

A list with the names of the columns of the sets, elements and relations.

See Also

[names\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
dimnames(TS)
```

droplevels.TidySet *Drop unused elements and sets*

Description

Drop elements and sets without any relation.

Usage

```
## S3 method for class 'TidySet'
droplevels(x, elements = TRUE, sets = TRUE, relations = TRUE, ...)
```

Arguments

x	A TidySet object.
elements	Logical value: Should elements be dropped?
sets	Logical value: Should sets be dropped?
relations	Logical value: Should sets be dropped?
...	Other arguments, currently ignored.

Value

A TidySet object.

Examples

```
rel <- list(A = letters[1:3], B = character())
TS <- tidySet(rel)
TS
sets(TS)
TS2 <- droplevels(TS)
TS2
sets(TS2)
```

elements *Elements of the TidySet*

Description

Given TidySet retrieve the elements or substitute them.

Usage

```

elements(object)

elements(object) <- value

## S4 method for signature 'TidySet'
elements(object)

## S4 replacement method for signature 'TidySet'
elements(object) <- value

replace_elements(object, value)

## S4 method for signature 'TidySet,missing'
nElements(object)

## S4 method for signature 'TidySet,logical'
nElements(object, all)

```

Arguments

object	A TidySet object.
value	Modification of the elements.
all	A logical value to count all elements or just those present.

Value

A data.frame with information about the elements

Methods (by class)

- `elements(TidySet)`: Retrieve the elements
- `elements(TidySet) <- value`: Modify the elements
- `nElements(object = TidySet, all = missing)`: Return the number of elements
- `nElements(object = TidySet, all = logical)`: Return the number of elements

See Also

[nElements\(\)](#)

Other slots: [relations\(\)](#), [sets\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```

TS <- tidySet(list(A = letters[1:5], B = letters[2:10]))
elements(TS)
elements(TS) <- data.frame(elements = letters[10:1])
TS2 <- replace_elements(TS, data.frame(elements = letters[1:11]))
nElements(TS)
nElements(TS2)

```

element_size	<i>Calculates the size of the elements</i>
--------------	--

Description

Assuming that the fuzzy values are probabilities, calculates the probability of being of different sizes for a given set.

Usage

```

element_size(object, elements = NULL)

## S4 method for signature 'TidySet'
element_size(object, elements = NULL)

```

Arguments

object	A TidySet object.
elements	The element from which the length is calculated.

Value

A list with the size of the elements or the probability of having that size.

Methods (by class)

- `element_size(TidySet)`: Calculates the number of sets an element appears with [length_set\(\)](#)

See Also

cardinality

Other sizes: [set_size\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```

relations <- data.frame(
  sets = c(rep("A", 5), "B", "C"),
  elements = c(letters[seq_len(6)], letters[6]),
  fuzzy = runif(7)
)
a <- tidySet(relations)
element_size(a)

```

extract-TidySet	<i>Extract</i>
-----------------	----------------

Description

Operators acting on TidySet to extract or replace parts. They are designed to resemble the basic operators.

Usage

```

## S4 method for signature 'TidySet'
x$name

## S4 replacement method for signature 'TidySet'
x$name <- value

## S4 method for signature 'TidySet'
x[i, j, k, ..., drop = TRUE]

## S4 replacement method for signature 'TidySet'
x[i, j, k, ...] <- value

## S4 method for signature 'TidySet'
x[[i, j, ..., exact = TRUE]]

## S4 replacement method for signature 'TidySet'
x[[i]] <- value

```

Arguments

x	A TidySet object.
name	The data about the TidySet object to extract.
value	The value to overwrite
i	Which rows do you want to keep? By default all.
j	Which slot do you want to extract? One of "sets", "elements" or "relations".
k	Which columns do you want to extract. By default all.

...	Other arguments currently ignored.
drop	Remove remaining elements, sets and relations? Passed to all arguments of <code>droplevels()</code> .
exact	A logical value. FALSE if fuzzy matching is wanted. Add values to the TidySet. Allows to control to which slot it is added.

Value

Always returns a valid [TidySet](#).

Examples

```

TS <- tidySet(list(A = letters[1:5], B = letters[6]))
TS[, "sets", "origin"] <- sample(c("random", "non-random"), 2, replace = TRUE)
TS[, "sets", "type"] <- c("Fantastic", "Wonderful")
# This produces a warning
# TS$description <- c("What", "can", "I", "say", "now", "?")
# Better to be explicit:
TS[, "relations", "description"] <- c("What", "can", "I", "say", "now", "?")
relations(TS)
TS[, "elements", "description"] <- rev(c("What", "can", "I", "say", "now", "?"))
elements(TS)
# Which will be deleted?
# TS$description <- NULL
TS$type
TS$origin <- c("BCN", "BDN")
# Different subsets
TS[1, "elements"]
TS[1, "sets"]
# Always print
TS
TS[, "sets", c("type", "origin")] # Same
TS[, "sets", "origin"] # Drop column type
is(TS[, "sets", "origin"])
TS[, "sets"]
TS[["A"]]
TS[["B"]]
TS[["C"]] # Any other set is the empty set

```

filter.TidySet

Filter TidySet

Description

Use `filter` to subset the TidySet object. You can use `activate` with `filter` or use the specific function. The S3 method filters using all the information on the TidySet.

Usage

```
## S3 method for class 'TidySet'
filter(.data, ...)

filter_set(.data, ...)

filter_element(.data, ...)

filter_relation(.data, ...)
```

Arguments

```
.data      The TidySet object.
...        The logical predicates in terms of the variables of the sets.
```

Value

A TidySet object.

See Also

[dplyr::filter\(\)](#) and [activate\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12),
  type = c(rep("Gene", 4), rep("lncRNA", 2))
)
TS <- tidySet(relations)
TS <- move_to(TS, from = "relations", to = "elements", column = "type")
filter(TS, elements == "a")
# Equivalent to filter_relation
filter(TS, elements == "a", sets == "a")
filter_relation(TS, elements == "a", sets == "a")
# Filter element
filter_element(TS, type == "Gene")
# Filter sets and by property of elements simultaneously
filter(TS, sets == "b", type == "lncRNA")
# Filter sets
filter_set(TS, sets == "b")
```

getGAF	<i>Read a GAF file</i>
--------	------------------------

Description

Read a GO Annotation File (GAF) formatted file

Usage

```
getGAF(x)
```

Arguments

x A file in GAF format

Value

A TidySet object

References

The format is defined [here](#).

See Also

Other IO functions: [getGMT\(\)](#), [getOBO\(\)](#)

Examples

```
gaffFile <- system.file(  
  package = "BaseSet", "extdata",  
  "go_human_rna_valid_subset.gaf"  
)  
gs <- getGAF(gaffFile)  
head(gs)
```

getGMT	<i>Import GMT (Gene Matrix Transposed) files</i>
--------	--

Description

The GMT (Gene Matrix Transposed) file format is a tab delimited file format that describes groups of genes. In this format, each row represents a group. Each group is described by a name, a description, and the genes in it.

Usage

```
getGMT(con, sep = "\t", ...)
```

Arguments

con	File name of the GMT file.
sep	GMT file field separator, by default tabs.
...	Other arguments passed to readLines.

Value

A TidySet object.

References

The file format is defined by the Broad Institute [here](#)

See Also

Other IO functions: [getGAF\(\)](#), [getOBO\(\)](#)

Examples

```
gmtFile <- system.file(  
  package = "BaseSet", "extdata",  
  "hallmark.gene.symbol.gmt"  
)  
gs <- getGMT(gmtFile)  
nRelations(gs)  
nElements(gs)  
nSets(gs)
```

getOBO

Read an OBO file

Description

Read an Open Biological and Biomedical Ontologies (OBO) formatted file

Usage

```
getOBO(x)
```

Arguments

x	Path to a file in OBO format.
---	-------------------------------

Value

A TidySet object.

References

The format is described [here](#)

See Also

Other IO functions: [getGAF\(\)](#), [getGMT\(\)](#)

Examples

```
oboFile <- system.file(  
  package = "BaseSet", "extdata",  
  "go-basic_subset.obo"  
)  
gs <- getOBO(oboFile)  
head(gs)
```

group

Create a new set from existing elements

Description

It allows to create a new set given some condition. If no element meet the condition an empty set is created.

Usage

```
group(object, name, ...)
```

```
## S3 method for class 'TidySet'  
group(object, name, ...)
```

Arguments

object	A TidySet object.
name	The name of the new set.
...	A logical condition to subset some elements.

Value

A TidySet object with the new set.

Examples

```
x <- list("A" = c("a" = 0.1, "b" = 0.5), "B" = c("a" = 0.2, "b" = 1))
TS <- tidySet(x)
TS1 <- group(TS, "C", fuzzy < 0.5)
TS1
sets(TS1)
TS2 <- group(TS, "D", fuzzy < 0)
sets(TS2)
r <- data.frame(
  sets = c(rep("A", 5), "B", rep("A2", 5), "B2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12),
  type = c(rep("Gene", 2), rep("Protein", 2), rep("lncRNA", 2))
)
TS3 <- tidySet(r)
group(TS3, "D", sets %in% c("A", "A2"))
```

group_by.TidySet	<i>group_by TidySet</i>
------------------	-------------------------

Description

Use `group_by` to group the `TidySet` object. You can use `activate` with `group_by` or with the whole data.

Usage

```
## S3 method for class 'TidySet'
group_by(.data, ...)
```

Arguments

.data	The <code>TidySet</code> object
...	The logical predicates in terms of the variables of the sets

Value

A grouped data.frame (See The `dplyr` help page)

See Also

`dplyr::group_by()` and `activate()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is.nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
a <- tidySet(relations)
elements(a) <- cbind(elements(a),
  type = c(rep("Gene", 4), rep("lncRNA", 2))
)
group_by(a, elements)
```

incidence

Incidence

Description

Check which elements are in which sets.

Usage

```
incidence(object)
```

```
## S4 method for signature 'TidySet'
incidence(object)
```

Arguments

`object` Object to be coerced or tested.

Value

A matrix with elements in rows and sets in columns where the values indicate the relationship between the element and the set.

Methods (by class)

- `incidence(TidySet)`: Incidence of the TidySet

See Also

[adjacency\(\)](#), [tidySet\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
x <- list("a" = letters[1:5], "b" = LETTERS[3:7])
a <- tidySet(x)
incidence(a)
```

independent

Independence of the sets

Description

Checks if the elements of the sets are present in more than one set.

Usage

```
independent(object, sets)
```

Arguments

object A [TidySet](#) object.

sets A character vector with the names of the sets to analyze.

Value

A logical value indicating if the sets are independent (TRUE) or not.

Examples

```
x <- list("A" = letters[1:5], "B" = letters[3:7], "C" = letters[6:10])
TS <- tidySet(x)
independent(TS)
independent(TS, c("A", "B"))
independent(TS, c("A", "C"))
independent(TS, c("B", "C"))
```

intersection	<i>Intersection of two or more sets</i>
--------------	---

Description

Given a TidySet creates a new set with the elements on the both of them following the logic defined on FUN.

Usage

```
intersection(object, sets, ...)

## S4 method for signature 'TidySet,character'
intersection(
  object,
  sets,
  name = NULL,
  FUN = "min",
  keep = FALSE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep,
  ...
)
```

Arguments

object	A TidySet object.
sets	The character of sets to be intersect.
...	Other named arguments passed to FUN.
name	The name of the new set. By defaults joins the sets with an \cup .
FUN	A function to be applied when performing the union. The standard intersection is the "min" function, but you can provide any other function that given a numeric vector returns a single number.
keep	A logical value if you want to keep originals sets.
keep_relations	A logical value if you wan to keep old relations.
keep_elements	A logical value if you wan to keep old elements.
keep_sets	A logical value if you wan to keep old sets.

Details

#' The default uses the min function following the [standard fuzzy definition](#), but it can be changed.

Value

A TidySet object.

Methods (by class)

- `intersection(object = TidySet, sets = character)`: Applies the standard intersection

See Also

Other methods that create new sets: `complement_element()`, `complement_set()`, `subtract()`, `union()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
rel <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = c("a", "b", "c", "d", "f", "f")
)
TS <- tidySet(rel)
intersection(TS, c("A", "B")) # Default Name
intersection(TS, c("A", "B"), "C") # Set the name
# Fuzzy set
rel <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = c("a", "b", "c", "d", "f", "f"),
  fuzzy = runif(6)
)
TS2 <- tidySet(rel)
intersection(TS2, c("A", "B"), "C")
intersection(TS2, c("A", "B"), "C", FUN = function(x){max(sqrt(x))})
```

`is.fuzzy`

Check if a TidySet is fuzzy.

Description

Check if there are fuzzy sets. A fuzzy set is a set where the relationship between elements is given by a probability (or uncertainty).

Usage

```
is.fuzzy(object)
```

```
## S4 method for signature 'TidySet'
```

```
is.fuzzy(object)
```

Arguments

object Object to be coerced or tested.

Value

A logical value.

Methods (by class)

- `is.fuzzy(TidySet)`: Check if it is fuzzy

See Also

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
TS <- tidySet(list(A = letters[1:5], B = letters[2:10]))
is.fuzzy(TS)
```

is_nested	<i>Are some sets as elements of other sets?</i>
-----------	---

Description

Check if some elements are also sets of others. This is also known as hierarchical sets.

Usage

```
is_nested(object)

## S3 method for class 'TidySet'
is_nested(object)
```

Arguments

object A TidySet object.

Value

A logical value: TRUE if there are some sets included as elements of others.

See Also

adjacency

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- list(A = letters[1:3], B = c(letters[4:5]))
TS <- tidySet(relations)
is_nested(TS)
TS2 <- add_relation(TS, data.frame(elements = "A", sets = "B"))
# Note that A is both a set and an element of B
TS2
is_nested(TS2)
```

length.TidySet

Length of the TidySet

Description

Returns the number of sets in the object.

Usage

```
## S3 method for class 'TidySet'
length(x)
```

Arguments

x A TidySet object.
No replacement function is available, either delete sets or add them.

Value

A numeric value.

See Also

`dim()`, `ncol()` and `nrow()`. Also look at `lengths()` for the number of relations of sets.

Examples

```
TS <- tidySet(list(A = letters[1:5], B = letters[6]))
length(TS)
```

lengths, TidySet-method

Lengths of the TidySet

Description

Returns the number of relations of each set in the object.

Usage

```
## S4 method for signature 'TidySet'  
lengths(x, use.names = TRUE)
```

Arguments

`x` A TidySet object.
`use.names` A logical value whether to inherit names or not.

Value

A vector with the number of different relations for each set.

See Also

[length\(\)](#), Use [set_size\(\)](#) if you are using fuzzy sets.

Examples

```
TS <- tidySet(list(A = letters[1:5], B = letters[6]))  
lengths(TS)
```

length_set

Calculates the probability

Description

Given several probabilities it looks for how probable is to have a vector of each length

Usage

```
length_set(probability)
```

Arguments

`probability` A numeric vector of probabilities.

Value

A vector with the probability of each set.

See Also

[length_probability\(\)](#) to calculate the probability of a specific length.

Examples

```
length_set(c(0.5, 0.1, 0.3, 0.5, 0.25, 0.23))
```

move_to

Move columns between slots

Description

Moves information from one slot to other slots. For instance from the sets to the relations.

Usage

```
move_to(object, from, to, columns)

## S4 method for signature
## 'TidySet,characterORfactor,characterORfactor,character'
move_to(object, from, to, columns)
```

Arguments

object	A TidySet object.
from	The name of the slot where the content is.
to	The name of the slot to move the content.
columns	The name of the columns that should be moved.

Value

A TidySet object where the content is moved from one slot to other.

Methods (by class)

- `move_to(object = TidySet, from = characterORfactor, to = characterORfactor, columns = character)`: Move columns

See Also

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
x <- list("A" = c("a" = 0.1, "b" = 0.5), "B" = c("a" = 0.2, "b" = 1))
TS <- tidySet(x)
TS <- mutate_element(TS, b = runif(2))
TS2 <- move_to(TS, from = "elements", to = "relations", "b")
# Note that apparently we haven't changed anything:
TS2
```

multiply_probabilities

Probability of a vector of probabilities

Description

Calculates the probability that all probabilities happened simultaneously. `independent_probabilities()` just multiply the probabilities of the index passed.

Usage

```
multiply_probabilities(p, i)
```

```
independent_probabilities(p, i)
```

Arguments

`p` Numeric vector of probabilities.
`i` Numeric integer index of the complementary probability.

Value

A numeric value of the probability.

See Also

[length_probability\(\)](#)

Examples

```
multiply_probabilities(c(0.5, 0.1, 0.3, 0.5, 0.25, 0.23), c(1, 3))
independent_probabilities(c(0.5, 0.1, 0.3, 0.5, 0.25, 0.23), c(1, 3))
```

mutate.TidySet	<i>Mutate</i>
----------------	---------------

Description

Use mutate to alter the TidySet object. You can use activate with mutate or use the specific function. The S3 method filters using all the information on the TidySet.

Usage

```
## S3 method for class 'TidySet'
mutate(.data, ...)

mutate_set(.data, ...)

mutate_element(.data, ...)

mutate_relation(.data, ...)
```

Arguments

.data	The TidySet object.
...	The logical predicates in terms of the variables of the sets.

Value

A TidySet object

See Also

[dplyr::mutate\(\)](#) and [activate\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
a <- tidySet(relations)
a <- mutate_element(a, Type = c(rep("Gene", 4), rep("lncRNA", 2)))
a
b <- mutate_relation(a, Type = sample(c("PPI", "PF", "MP"), 12,
  replace = TRUE
))
```

`names.TidySet`*Names of a TidySet*

Description

Retrieve the column names of a slots of a TidySet.

Usage

```
## S3 method for class 'TidySet'
names(x)
```

Arguments

x A TidySet object.

Value

A vector with the names of the present columns of the sets, elements and relations. If a slot is active it only returns the names of that slot.

See Also

[dimnames\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
names(TS)
names(activate(TS, "sets"))
```

name_elements	<i>Name elements</i>
---------------	----------------------

Description

Retrieve the name of the elements.

Usage

```
name_elements(object, all, ...)  
  
## S4 method for signature 'TidySet,logical'  
name_elements(object, all = TRUE)  
  
## S4 method for signature 'TidySet,missing'  
name_elements(object, all)  
  
## S4 replacement method for signature 'TidySet,logical,characterORfactor'  
name_elements(object, all) <- value  
  
## S4 replacement method for signature 'TidySet,missing,characterORfactor'  
name_elements(object) <- value
```

Arguments

object	A TidySet object.
all	A logical value if all elements should be reported or only those present.
...	Other arguments passed to methods.
value	A character with the new names for the elements.

Value

A TidySet object.

Methods (by class)

- `name_elements(object = TidySet, all = logical)`: Name elements
- `name_elements(object = TidySet, all = missing)`: Name elements
- `name_elements(object = TidySet, all = logical) <- value`: Rename elements
- `name_elements(object = TidySet, all = missing) <- value`: Rename elements

See Also

Other names: [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
name_elements(TS)
```

name_elements<-	<i>Rename elements</i>
-----------------	------------------------

Description

Rename elements.

Usage

```
name_elements(object, all, ...) <- value
```

Arguments

object	A TidySet object.
all	A logical value whether to return all elements or just those present.
...	Other arguments passed to methods.
value	A character with the new names for the elements.

Value

A TidySet object.

See Also

[rename_elements\(\)](#)

Other names: [name_elements\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
TS
name_elements(TS) <- letters[1:6]
```

name_sets	<i>Name sets</i>
-----------	------------------

Description

Retrieve the name of the sets.

Usage

```
name_sets(object, all, ...)

## S4 method for signature 'TidySet,logical'
name_sets(object, all = TRUE)

## S4 method for signature 'TidySet,missing'
name_sets(object, all)

## S4 replacement method for signature 'TidySet,logical,characterORfactor'
name_sets(object, all) <- value

## S4 replacement method for signature 'TidySet,missing,characterORfactor'
name_sets(object, all) <- value
```

Arguments

object	A TidySet object.
all	A logical value if all sets should be reported or only those present.
...	Other arguments passed to methods.
value	A character with the new names for the sets.

Value

A TidySet object.

Methods (by class)

- name_sets(object = TidySet, all = logical): Name sets
- name_sets(object = TidySet, all = missing): Name sets
- name_sets(object = TidySet, all = logical) <- value: Rename sets
- name_sets(object = TidySet, all = missing) <- value: Rename sets

  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
name_sets(TS)
```

name_sets<-	<i>Rename sets</i>
-------------	--------------------

Description

Rename sets.

Usage

```
name_sets(object, all, ...) <- value
```

Arguments

object	A TidySet object.
all	A logical value whether it should return all sets present.
...	Other arguments passed to methods.
value	A character with the new names for the sets.

Value

A TidySet object.

See Also

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
TS
name_sets(TS) <- LETTERS[1:2]
```

naming

Name an operation

Description

Helps setting up the name of an operation.

Usage

```
naming(
  start = NULL,
  sets1,
  middle = NULL,
  sets2 = NULL,
  collapse_symbol = "union"
)
```

Arguments

`start, middle` Character used as a start symbol or to divide `sets1` and `sets2`.
`sets1, sets2` Character of sets
`collapse_symbol` Name of the symbol that joins the sets on `sets1` and `sets2`.

Value

A character vector combining the sets

See Also

[set_symbols\(\)](#)

Examples

```
naming(sets1 = c("a", "b"))
naming(sets1 = "a", middle = "union", sets2 = "b")
naming(sets1 = "a", middle = "intersection", sets2 = c("b", "c"))
naming(sets1 = "a", middle = "intersection", sets2 = c("b", "c"))
naming(
  start = "complement", sets1 = "a", middle = "intersection",
  sets2 = c("b", "c"), collapse_symbol = "intersection"
)
```

nElements

Number of elements

Description

Check the number of elements of the TidySet.

Usage

```
nElements(object, all)
```

Arguments

object	Object to be coerced or tested.
all	Logical value to count all elements.

Value

A numeric value with the number of elements.

See Also

Other count functions: [nRelations\(\)](#), [nSets\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
TS <- tidySet(list(A = letters[1:2], B = letters[5:7]))
nElements(TS)
```

nRelations

Number of relations

Description

Check the number of relations of the TidySet.

Usage

```
nRelations(object)
```

Arguments

object Object to be coerced or tested.

Value

A numeric value with the number of the relations.

See Also

Other count functions: [nElements\(\)](#), [nSets\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
TS <- tidySet(list(A = letters[1:2], B = letters[5:7]))
nRelations(TS)
```

nSets	<i>Number of sets</i>
-------	-----------------------

Description

Check the number of sets of the TidySet

Usage

```
nSets(object, all)
```

Arguments

object	Object to be coerced or tested.
all	Logical value to count all sets.

Value

The number of sets present.

See Also

Other count functions: [nElements\(\)](#), [nRelations\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
TS <- tidySet(list(A = letters[1:2], B = letters[5:7]))
nSets(TS)
```

power_set	<i>Create the power set</i>
-----------	-----------------------------

Description

Create the power set of the object: All the combinations of the elements of the sets.

Usage

```
power_set(object, set, name, ...)
```

Arguments

object	A TidySet object.
set	The name of the set to be used for the power set, if not provided all are used.
name	The root name of the new set, if not provided the standard notation "P()" is used.
...	Other arguments passed down if possible.

Value

A TidySet object with the new set.

See Also

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)]
)
TS <- tidySet(relations)
power_set(TS, "a", name = "power_set")
```

pull.TidySet

Pull from a TidySet

Description

Use pull to extract the columns of a TidySet object. You can use activate with filter or use the specific function. The S3 method filters using all the information on the TidySet.

Usage

```
## S3 method for class 'TidySet'
pull(.data, var = -1, name = NULL, ...)

pull_set(.data, var = -1, name = NULL, ...)

pull_element(.data, var = -1, name = NULL, ...)

pull_relation(.data, var = -1, name = NULL, ...)
```

Arguments

<code>.data</code>	The TidySet object
<code>var</code>	The literal variable name, a positive integer or a negative integer column position.
<code>name</code>	Column used to name the output.
<code>...</code>	Currently not used.

Value

A TidySet object

See Also

`dplyr::pull()` and `activate()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
a <- tidySet(relations)
a <- mutate_element(a, type = c(rep("Gene", 4), rep("lncRNA", 2)))
pull(a, type)
# Equivalent to pull_relation
b <- activate(a, "relations")
pull_relation(b, elements)
pull_element(b, elements)
# Filter element
pull_element(a, type)
# Filter sets
pull_set(a, sets)
```

relations

Relations of the TidySet

Description

Given TidySet retrieve the relations or substitute them. `TidySet()` object

Usage

```

relations(object)

relations(object) <- value

## S4 method for signature 'TidySet'
relations(object)

replace_relations(object, value)

## S4 replacement method for signature 'TidySet'
relations(object) <- value

## S4 method for signature 'TidySet'
nRelations(object)

```

Arguments

object	Object to be coerced or tested.
value	Modification of the relations.

Value

A data frame with information about the relations between elements and sets.

Methods (by class)

- `relations(TidySet)`: Retrieve the relations
- `relations(TidySet) <- value`: Modify the relations
- `nRelations(TidySet)`: Return the number of unique relations

See Also

[nRelations\(\)](#)

Other slots: [elements\(\)](#), [sets\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```

TS <- tidySet(list(A = letters[1:2], B = letters[5:7]))
relations(TS)

```

remove_column	<i>Remove column</i>
---------------	----------------------

Description

Removes column from a slot of the TidySet object.

Usage

```
remove_column(object, slot, column_names)

## S4 method for signature 'TidySet,character,character'
remove_column(object, slot, column_names)
```

Arguments

object	A TidySet object.
slot	A TidySet slot.
column_names	The name of the columns.

Value

A TidySet object.

Methods (by class)

- `remove_column(object = TidySet, slot = character, column_names = character)`: Remove columns to any slot

See Also

[rename_set\(\)](#)

Other column: [add_column\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
x <- data.frame(sets = c(rep("A", 5), rep("B", 5)),
               elements = c(letters[1:5], letters[3:7]),
               extra = sample(c("YES", "NO"), 10, replace = TRUE))
TS <- tidySet(x)
TS
remove_column(TS, "relations", "extra")
```

remove_element	<i>Remove elements</i>
----------------	------------------------

Description

Given a TidySet remove elements and the related relations and if required also the sets.

Usage

```
remove_element(object, elements, ...)

## S4 method for signature 'TidySet,characterORfactor'
remove_element(object, elements)
```

Arguments

object	A TidySet object.
elements	The elements to be removed.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A TidySet object.

Methods (by class)

- `remove_element(object = TidySet, elements = characterORfactor)`: Removes everything related to an element

See Also

Other remove functions: [remove_relation\(\)](#), [remove_set\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
remove_element(TS, "c")
```

remove_relation	<i>Remove a relation</i>
-----------------	--------------------------

Description

Given a TidySet removes relations between elements and sets

Usage

```
remove_relation(object, elements, sets, ...)
```

```
## S4 method for signature 'TidySet,characterORfactor,characterORfactor'
remove_relation(object, elements, sets)
```

Arguments

object	A TidySet object
elements	The elements of the sets.
sets	The name of the new set.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A TidySet object.

Methods (by class)

- `remove_relation(object = TidySet, elements = characterORfactor, sets = characterORfactor)`: Removes a relation between elements and sets.

See Also

Other remove functions: [remove_element\(\)](#), [remove_set\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#),

```
name_elements<-(), name_sets<-(), name_sets(), power_set(), pull.TidySet(), relations(),
remove_column(), remove_element(), remove_set(), rename_elements(), rename_set(), select.TidySet(),
set_size(), sets(), subtract(), union()
```

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
remove_relation(TS, "A", "a")
```

remove_set

Remove sets

Description

Given a TidySet remove sets and the related relations and if required also the elements

Usage

```
remove_set(object, sets, ...)
```

```
## S4 method for signature 'TidySet,characterORfactor'
remove_set(object, sets)
```

Arguments

object	A TidySet object.
sets	The sets to be removed.
...	Placeholder for other arguments that could be passed to the method. Currently not used.

Value

A TidySet object.

Methods (by class)

- `remove_set(object = TidySet, sets = characterORfactor)`: Removes everything related to a set

See Also

Other remove functions: `remove_element()`, `remove_relation()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- data.frame(
  sets = c("A", "A", "B", "B", "C", "C"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
remove_set(TS, "B")
```

rename_elements	<i>Rename elements</i>
-----------------	------------------------

Description

Change the default names of sets and elements.

Usage

```
rename_elements(object, old, new)
```

```
## S4 method for signature 'TidySet'
rename_elements(object, old, new)
```

Arguments

object	A TidySet object.
old	A character vector of to be renamed.
new	A character vector of with new names.

Value

A TidySet object.

Methods (by class)

- `rename_elements(TidySet)`: Rename elements

See Also

[name_elements\(\)](#)

Other renames: [rename_set\(\)](#)

Other names: [name_elements<-\(\)](#), [name_elements\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [rename_set\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```
x <- list("A" = letters[1:5], "B" = letters[3:7])
TS <- tidySet(x)
name_elements(TS)
TS2 <- rename_elements(TS, "a", "first")
name_elements(TS2)
```

rename_set

Rename sets

Description

Change the default names of sets and elements.

Usage

```
rename_set(object, old, new)
```

```
## S4 method for signature 'TidySet'
rename_set(object, old, new)
```

Arguments

object	A TidySet object.
old	A character vector of to be renamed.
new	A character vector of with new names.

Value

A TidySet object.

Methods (by class)

- `rename_set(TidySet)`: Rename sets

See Also`name_sets()`Other renames: `rename_elements()`Other names: `name_elements<-()`, `name_elements()`, `name_sets<-()`, `name_sets()`, `rename_elements()`Other methods: `TidySet`-class, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `select.TidySet()`, `set_size()`, `sets()`, `subtract()`, `union()`**Examples**

```
x <- list("A" = letters[1:5], "B" = letters[3:7])
TS <- tidySet(x)
name_sets(TS)
TS2 <- rename_set(TS, "A", "C")
name_sets(TS2)
```

`select.TidySet`*select from a TidySet*

Description

Use `select` to extract the columns of a `TidySet` object. You can use `activate` with `filter` or use the specific function. The S3 method filters using all the information on the `TidySet`.

Usage

```
## S3 method for class 'TidySet'
select(.data, ...)

select_set(.data, ...)

select_element(.data, ...)

select_relation(.data, ...)
```

Arguments

```
.data      The TidySet object
...        The name of the columns you want to keep, remove or rename.
```

ValueA `TidySet` object

See Also

`dplyr::select()` and `activate()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `set_size()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b", rep("a2", 5), "b2"),
  elements = rep(letters[seq_len(6)], 2),
  fuzzy = runif(12)
)
a <- tidySet(relations)
a <- mutate_element(a,
  type = c(rep("Gene", 4), rep("lncRNA", 2))
)
a <- mutate_set(a, Group = c("UFM", "UAB", "UPF", "MIT"))
b <- select(a, -type)
elements(b)
b <- select_element(a, elements)
elements(b)
# Select sets
select_set(a, sets)
```

sets

Sets of the TidySet

Description

Given TidySet retrieve the sets or substitute them.

Usage

```
sets(object)
```

```
sets(object) <- value
```

```
## S4 method for signature 'TidySet'
sets(object)
```

```
## S4 replacement method for signature 'TidySet'
sets(object) <- value
```

```

replace_sets(object, value)

## S4 method for signature 'TidySet,missing'
nSets(object)

## S4 method for signature 'TidySet,logical'
nSets(object, all)

```

Arguments

object	A TidySet object.
value	Modification of the sets.
all	A logical value whether it should return all sets or only those present.

Value

A data.frame with information from the sets.

Methods (by class)

- `sets(TidySet)`: Retrieve the sets information
- `sets(TidySet) <- value`: Modify the sets information
- `nSets(object = TidySet, all = missing)`: Return the number of sets
- `nSets(object = TidySet, all = logical)`: Return the number of sets

See Also

[nSets\(\)](#)

Other slots: [elements\(\)](#), [relations\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```

TS <- tidySet(list(A = letters[1:5], B = letters[2:10]))
sets(TS)
sets(TS) <- data.frame(sets = c("B", "A"))
TS2 <- replace_sets(TS, data.frame(sets = c("A", "B", "C")))
sets(TS2)
nSets(TS)
nSets(TS2)

```

set_size	<i>Calculates the size of a set</i>
----------	-------------------------------------

Description

Assuming that the fuzzy values are probabilities, calculates the probability of being of different sizes for a given set.

Usage

```
set_size(object, sets = NULL)

## S4 method for signature 'TidySet'
set_size(object, sets = NULL)
```

Arguments

object	A TidySet object.
sets	The sets from which the length is calculated.

Value

A list with the size of the set or the probability of having that size.

Methods (by class)

- `set_size(TidySet)`: Calculates the size of a set using `length_set()`

See Also

`cardinality`

Other sizes: `element_size()`

Other methods: `TidySet-class`, `activate()`, `add_column()`, `add_relation()`, `arrange.TidySet()`, `cartesian()`, `complement_element()`, `complement_set()`, `complement()`, `element_size()`, `elements()`, `filter.TidySet()`, `group_by.TidySet()`, `group()`, `incidence()`, `intersection()`, `is.fuzzy()`, `is_nested()`, `move_to()`, `mutate.TidySet()`, `nElements()`, `nRelations()`, `nSets()`, `name_elements<-()`, `name_sets<-()`, `name_sets()`, `power_set()`, `pull.TidySet()`, `relations()`, `remove_column()`, `remove_element()`, `remove_relation()`, `remove_set()`, `rename_elements()`, `rename_set()`, `select.TidySet()`, `sets()`, `subtract()`, `union()`

Examples

```
relations <- data.frame(
  sets = c(rep("A", 5), "B", "C"),
  elements = c(letters[seq_len(6)], letters[6]),
  fuzzy = runif(7)
)
```

```
a <- tidySet(relations)
set_size(a)
```

set_symbols	<i>A subset of symbols related to sets</i>
-------------	--

Description

Name and symbol of operations related to sets, including intersection and union among others:

Usage

```
set_symbols
```

Format

An object of class character of length 16.

References

<https://www.fileformat.info/info/unicode/category/Sm/list.htm>

Examples

```
set_symbols
```

show, TidySet-method	<i>Method to show the TidySet object</i>
----------------------	--

Description

Prints the resulting table of a TidySet object. Does not shown elements or sets without any relationship (empty sets). To see them use `sets()` or `elements()`.

Usage

```
## S4 method for signature 'TidySet'
show(object)
```

Arguments

object A TidySet

Value

A table with the information of the relationships.

size	<i>Size</i>
------	-------------

Description

Calculate the size of the elements or sets, using the fuzzy values as probabilities. First it must have active either sets or elements.

Usage

```
size(object, ...)
```

Arguments

object	A TidySet object.
...	Character vector with the name of elements or sets you want to calculate the size of.

Value

The size of the elements or sets. If there is no active slot or it is the relations slot returns the TidySet object with a warning.

See Also

A related concept [cardinality\(\)](#). It is calculated using [length_set\(\)](#).

Examples

```
rel <- data.frame(
  sets = c(rep("A", 5), "B", "C"),
  elements = c(letters[seq_len(6)], letters[6])
)
TS <- tidySet(rel)
TS <- activate(TS, "elements")
size(TS)
TS <- activate(TS, "sets")
size(TS)
# With fuzzy sets
relations <- data.frame(
  sets = c(rep("A", 5), "B", "C"),
  elements = c(letters[seq_len(6)], letters[6]),
  fuzzy = runif(7)
)
TS <- tidySet(relations)
TS <- activate(TS, "elements")
size(TS)
TS <- activate(TS, "sets")
size(TS)
```

subtract	<i>Subtract</i>
----------	-----------------

Description

Elements in a set not present in the other set. Equivalent to `setdiff()`.

Usage

```
subtract(object, set_in, not_in, ...)
```

```
## S4 method for signature 'TidySet,characterORfactor,characterORfactor'
subtract(
  object,
  set_in,
  not_in,
  name = NULL,
  keep = TRUE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep
)
```

Arguments

<code>object</code>	A TidySet object.
<code>set_in</code>	Name of the sets where the elements should be present.
<code>not_in</code>	Name of the sets where the elements should not be present.
<code>...</code>	Placeholder for other arguments that could be passed to the method. Currently not used.
<code>name</code>	Name of the new set. By default it adds a "C".
<code>keep</code>	Logical value to keep all the other sets.
<code>keep_relations</code>	A logical value if you want to keep old relations.
<code>keep_elements</code>	A logical value if you want to keep old elements.
<code>keep_sets</code>	A logical value if you want to keep old sets.

Value

A TidySet object.

Methods (by class)

- `subtract(object = TidySet, set_in = characterORfactor, not_in = characterORfactor)`: Elements present in sets but not in other sets

See Also

[setdiff\(\)](#)

Other complements: [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#)

Other methods that create new sets: [complement_element\(\)](#), [complement_set\(\)](#), [intersection\(\)](#), [union\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [union\(\)](#)

Examples

```
relations <- data.frame(
  sets = c("A", "A", "B", "B", "C", "C"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
TS <- tidySet(relations)
subtract(TS, "A", "B")
subtract(TS, "A", "B", keep = FALSE)
```

tidy

Convert GSEABase classes to a TidySet

Description

Convert GSEABase classes to a TidySet

Usage

```
tidy(object)

## S3 method for class 'GeneSetCollection'
tidy(object)

## S3 method for class 'GeneSet'
tidy(object)
```

Arguments

object A GeneSetCollection or a GeneSet derived object

Value

A TidySet object.

Methods (by class)

- tidy(GeneSetCollection): Converts to a tidySet given a GeneSetCollection
- tidy(GeneSet): Converts to a tidySet given a GeneSet

Examples

```
# Needs GSEABase package from Bioconductor
if (requireNamespace("GSEABase", quietly = TRUE)) {
  library("GSEABase")
  gs <- GeneSet()
  gs
  tidy(gs)
  fl <- system.file("extdata", "Broad.xml", package="GSEABase")
  gs2 <- getBroadSets(fl) # actually, a list of two gene sets
  TS <- tidy(gs2)
  dim(TS)
  sets(TS)
}
```

tidySet

Create a TidySet object

Description

These functions help to create a TidySet object from data.frame, list, matrix, and GO3AnnDbBimap. They can create both fuzzy and standard sets.

Usage

```
tidySet(relations)

## S3 method for class 'data.frame'
tidySet(relations)

## S3 method for class 'list'
tidySet(relations)

## S3 method for class 'matrix'
tidySet(relations)

## S3 method for class 'Go3AnnDbBimap'
tidySet(relations)

## S3 method for class 'TidySet'
tidySet(relations)
```

Arguments

relations An object to be coerced to a TidySet.

Details

Elements or sets without any relation are not shown when printed.

Value

A TidySet object.

Methods (by class)

- tidySet(data.frame): Given the relations in a data.frame
- tidySet(list): Convert to a TidySet from a list.
- tidySet(matrix): Convert an incidence matrix into a TidySet
- tidySet(Go3AnnDbBimap): Convert Go3AnnDbBimap into a TidySet object.
- tidySet(TidySet): Convert TidySet into a TidySet object.

See Also

[TidySet](#)

Examples

```
relations <- data.frame(
  sets = c(rep("a", 5), "b"),
  elements = letters[seq_len(6)]
)
tidySet(relations)
relations2 <- data.frame(
  sets = c(rep("A", 5), "B"),
  elements = letters[seq_len(6)],
  fuzzy = runif(6)
)
tidySet(relations2)
# A
x <- list("A" = letters[1:5], "B" = LETTERS[3:7])
tidySet(x)
# A fuzzy set taken encoded as a list
A <- runif(5)
names(A) <- letters[1:5]
B <- runif(5)
names(B) <- letters[3:7]
relations <- list(A, B)
tidySet(relations)
# Will error
# x <- list("A" = letters[1:5], "B" = LETTERS[3:7], "c" = runif(5))
# a <- tidySet(x) # Only characters or factors are allowed as elements.
M <- matrix(c(1, 0.5, 1, 0), ncol = 2,
```

```

      dimnames = list(c("A", "B"), c("a", "b")))
tidySet(M)

```

TidySet-class	<i>A tidy class to represent a set</i>
---------------	--

Description

A set is a group of unique elements it can be either a fuzzy set, where the relationship is between 0 or 1 or nominal.

Details

When printed if an element or a set do not have any relationship is not shown. They can be created from lists, matrices or data.frames. Check [tidySet\(\)](#) constructor for more information.

Slots

`relations` A data.frame with elements and the sets were they belong.

`elements` A data.frame of unique elements and related information.

`sets` A data.frame of unique sets and related information.

See Also

[tidySet](#)

Other methods: [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is.nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#), [union\(\)](#)

Examples

```

x <- list("A" = letters[1:5], "B" = LETTERS[3:7])
a <- tidySet(x)
a
x <- list("A" = letters[1:5], "B" = character())
b <- tidySet(x)
b
name_sets(b)

```

union	<i>Join sets</i>
-------	------------------

Description

Given a TidySet merges several sets into the new one using the logic defined on FUN.

Usage

```
union(object, ...)

## S3 method for class 'TidySet'
union(
  object,
  sets,
  name = NULL,
  FUN = "max",
  keep = FALSE,
  keep_relations = keep,
  keep_elements = keep,
  keep_sets = keep,
  ...
)
```

Arguments

object	A TidySet object.
...	Other named arguments passed to FUN.
sets	The name of the sets to be used.
name	The name of the new set. By defaults joins the sets with an \cap .
FUN	A function to be applied when performing the union. The standard union is the "max" function, but you can provide any other function that given a numeric vector returns a single number.
keep	A logical value if you want to keep.
keep_relations	A logical value if you wan to keep old relations.
keep_elements	A logical value if you wan to keep old elements.
keep_sets	A logical value if you wan to keep old sets.

Details

The default uses the max function following the [standard fuzzy definition](#), but it can be changed. See examples below.

Value

A TidySet object.

See Also

[union_probability\(\)](#)

Other methods that create new sets: [complement_element\(\)](#), [complement_set\(\)](#), [intersection\(\)](#), [subtract\(\)](#)

Other methods: [TidySet-class](#), [activate\(\)](#), [add_column\(\)](#), [add_relation\(\)](#), [arrange.TidySet\(\)](#), [cartesian\(\)](#), [complement_element\(\)](#), [complement_set\(\)](#), [complement\(\)](#), [element_size\(\)](#), [elements\(\)](#), [filter.TidySet\(\)](#), [group_by.TidySet\(\)](#), [group\(\)](#), [incidence\(\)](#), [intersection\(\)](#), [is.fuzzy\(\)](#), [is_nested\(\)](#), [move_to\(\)](#), [mutate.TidySet\(\)](#), [nElements\(\)](#), [nRelations\(\)](#), [nSets\(\)](#), [name_elements<-\(\)](#), [name_sets<-\(\)](#), [name_sets\(\)](#), [power_set\(\)](#), [pull.TidySet\(\)](#), [relations\(\)](#), [remove_column\(\)](#), [remove_element\(\)](#), [remove_relation\(\)](#), [remove_set\(\)](#), [rename_elements\(\)](#), [rename_set\(\)](#), [select.TidySet\(\)](#), [set_size\(\)](#), [sets\(\)](#), [subtract\(\)](#)

Examples

```
# Classical set
rel <- data.frame(
  sets = c(rep("A", 5), "B", "B"),
  elements = c(letters[seq_len(6)], "a")
)
TS <- tidySet(rel)
union(TS, c("B", "A"))
# Fuzzy set
rel <- data.frame(
  sets = c(rep("A", 5), "B", "B"),
  elements = c(letters[seq_len(6)], "a"),
  fuzzy = runif(7)
)
TS2 <- tidySet(rel)
# Standard default logic
union(TS2, c("B", "A"), "C")
# Probability logic
union(TS2, c("B", "A"), "C", FUN = union_probability)
```

union_closed

Union closed sets

Description

Tests if a given object is union-closed.

Usage

```
union_closed(object, ...)
```

```
## S3 method for class 'TidySet'
union_closed(object, sets = NULL, ...)
```

Arguments

object	A TidySet object.
...	Other named arguments passed to FUN.
sets	The name of the sets to be used.

Value

A logical value: TRUE if the combinations of sets produce already existing sets, FALSE otherwise.

Examples

```
l <- list(A = "1",
         B = c("1", "2"),
         C = c("2", "3", "4"),
         D = c("1", "2", "3", "4"))
)
TS <- tidySet(l)
union_closed(TS)
union_closed(TS, sets = c("A", "B", "C"))
union_closed(TS, sets = c("A", "B", "C", "D"))
```

union_probability *Calculates the probability of a single length*

Description

Creates all the possibilities and then add them up. union_probability Assumes independence between the probabilities to calculate the final size.

Usage

```
union_probability(p)

length_probability(p, size)
```

Arguments

p	Numeric vector of probabilities.
size	Integer value of the size of the selected values.

Value

A numeric value of the probability of the given size.

See Also

[multiply_probabilities\(\)](#) and [length_set\(\)](#)

Examples

```
length_probability(c(0.5, 0.75), 2)  
length_probability(c(0.5, 0.75, 0.66), 1)  
length_probability(c(0.5, 0.1, 0.3, 0.5, 0.25, 0.23), 2)  
union_probability(c(0.5, 0.1, 0.3))
```
