`quartificate`*Transform Google Doc to Quarto book*

---

**Description**

Transform Google Doc to Quarto book

**Usage**

```
quartificate(gdoc_id, path, render = FALSE, fix_lists = FALSE)
```

**Arguments**

<code>gdoc_id</code>	ID of the Google Document.
<code>path</code>	A path, where to create the Quarto book. It will be created if needed.
<code>render</code>	Logical. Whether to render the resulting Quarto book.
<code>fix_lists</code>	Logical. Whether to try and fix lists, see Details.

**Details**

If your Google Document contains lists whose items span several lines, you might get better results with the `fix_lists` parameter set to `TRUE`. The problem is that in Google Docs lists, from the second line lines in items have a small indentation. Pandoc tends to interpret this as a blockquote. We try to fix that by merging blockquotes in their previous sibling, when that previous sibling is a list item.

**Value**

Nothing.

**Examples**

```
id <- googledrive::drive_find(
  q = "name contains 'My Example Document'"
)$id
quarto_dir <- withr::local_tempdir()
quartificate::quartificate(id, quarto_dir, render = TRUE)
```
